                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PCR-amplified using gene-specific primers to contain the complete open reading frame (based on known gene sequences available from NCBI's RefSeg). Template for PCR is CDNA derived from either pooled cytoplasmic polya RNA from 30 cells lines or pooled total RNA from 10 different tissues (from BD Biosciences/Clontech and Washington University). PCR products are directionally cloned into the loxp sites of the pDNR-Dual vector. Library constructed by Dr. Narayan Bhat, Earl Bere III and Hongling Liao (Gene Expression Laboratory, Research Technology Program, SAIC Frederick, NCI-Frederick, Frederick, MD 21702). For information on which gene each clone represents, please
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    visit our anonymous ftp site at

/clones_routhis_library have been
pCR-amplified using gene-specific primers to contain the
complete open reading frame (based on known gene sequences
available from NCBI's RefSeq). Template for PCR is cDNA
derived from sither pooled cytoplasmic polyA RNA from 30
cells lines or pooled total RNA from 10 different tissues
(from BD Biosciences/Clontech and Washington University).
PCR products are directionally cloned into the loxp sites
of the pDNR-Dual vector. Library constructed by Dr.
Narayan Bhat, Earl Bere III and Hongling Liao (Gene
Expression Laboratory, Research Technology Program, SAIC
Frederick, NCI-Frederick, Frederick, MD 21702). For

/note="Tvector: pDNR-Dual; Site_1: loxP-Sall; Site_2:
loxP-HiddIII; Clones from this library have been
PCR-amplified using gene-specific primers to contain the
complete open reading frame (based on known gene sequences
exomplete open RCBI's RefSeg). Template for PCR is cDNA
derived from either pooled cytoplasmic polyA RNA from 30
cells lines or pooled totach and Knashington University).
PCR products are directionally cloned into the loxP sites
of the pDNR-Dual vector. Library constructed by Dr.
Narayan Bhat, Earl Bere III and Hongling Liao (Gene
Expression Laboratory, Research Technology Program, SAIC
Prederick, NCI-Frederick, Prederick, MD 21702). For
information on which gene each clone represents, please
visit our anonymous ftp site at
ftp://image.llnl.gov/image/rearrayed_plates/IRBK.preSV.dat
a Note: this is a NIH_MGC Library."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            83
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 20
```

```
complete open reading frame (based on known gene sequences available from NCBI's RefSeq). Template for PCR is cDNA derived from either pooled cytoplasmic polyA RNA from 30 cells lines or pooled total RNA from 10 different tissues (from BD Biosciences/Clontech and Washington University). PCR products are directionally cloned into the loxp sites of the pDNR-Dual vector. Library constructed by Dr.

Narayan Bhat, Earl Bere III and Hongling Liao (Gene Expression Laboratory, Research Technology Program, SAIC Frederick, NCI-Frederick, Frederick, MD 21702). For information on which gene each clone represents, please visit our anonymous figs site at ftp://image.llnl.gov/image/rearrayed_plates/IRBK.preSV.dat a Note: this is a NH_MGC Library."

The invention relates to canine II-4, canine or feline Flt-3 ligand, canine or feline CD40, canine or feline CD54 (CD40 ligand), canine II-5, canine II-13, feline interferon-alpha (IFN-alpha) CC and feline granulocyte macrophage colony-stimulating factor (GMCSF), and CC nucleotides which encode these immunoregulatory proteins. The proteins, CC their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune CC response in animals (particularly cats, dogs, horses and humans). They CC may be used to treat autoimmune or infectious diseases including CC allergies, tumours, inflammation and graft rejection, and to increase the CC also be used for the recombinant production of a protein, while CC nucleotide fragments are useful as probes, as amplification primers and CC also be used for the recombinant production of a protein, while CC nucleotide for the recombinant production of a protein, while control of a proteins may be used to raise antibodies and to screen for modulators and traiter. The proteins may be used to raise antibodies and to screen for modulators and the proteins may be used to raise antibodies and to acreen for modulators.

Sequences AAZ55546-Z5551 represent cDNA sequences encoding canine CC interleukin-5 (IL-5). The invention relates to canine IL-4, canine or feline Flt-3 ligand, canine or feline CD40, canine or feline CD154 (CD40 ligand), canine IL-5, canine IL-13, feline interferon-alpha (IFN-alpha) and feline granulocyte macrophage colony-stimulating factor (GMCSF), and colorides which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune cresponse in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including allergies, tumours, inflammation and graft rejection, and to increase the cresponse from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while as ources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and in drug
                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids encoding immunoregurator, useful for treating or preventing e.g.

                                                                                                                                                                                                                                                                              Sequences AAZ55546-Z5551 represent cDNA sequences encoding canine CC interleukin-5 (II-5). The invention relates to canine II-4, canine or Ct feline Flt-3 ligand, canine or feline CD40, canine or feline CD154 (CD40 ligand), canine II-5, canine II-13, feline interferon-alpha (IFN-alpha) CC and feline granulocyte macrophage colony-stimulating factor (GMCSF), and CC nucleotides which encode these immunoregulatory proteins. The proteins, CC their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune CC response in animals (particularly cats, dogs, horses and humans). They CC may be used to treat autoimmune or infectious diseases including CC allorgies, tumours, inflammation and graft rejection, and to increase the CC response from a co-administered antigen. The nucleotide squences can CC also be used for the recombinant production of a protein, while CC nucleotide fragments are useful as probes, as amplification primers and CC nucleotide fragments are useful as probes, as amplification primers and CC nucleotide fragments are useful as probes, as amplification primers and CC as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). CC The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and in drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
Sequences AAZ55546-Z5551 represent cDNA sequences encoding canine II.-1 (Interleukin-5 (II.-5). The invention relates to canine II.-4, canine or feline Plt-3 ligand, canine or feline CD40, canine or feline CD154 (CD40 ligand), canine II.-5, canine II.-13, feline interferon-alpha (IFM-alpha) and feline granulocyte macrophage colony-stimulating factor (GMCSF), and mucleotides which encode these immunoregulatory proteins. The proteins, complete their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including callergies, tumours, inflammation and graft rejection, and to increase the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides).
                                                                                                                                                                                                                                                                                                                                                                                    Claim 1h; Page 226; 264pp; English

Nucleic acids encoding immunoregulatory proteins from cats or useful for treating or preventing e.g. tumors or autoimmune di disease.

Claim 1h; Page 223-224; 264pp; English.

Sequences AAZ55546-Z5551 represent cDNA sequences encoding canine CC interleukin-5 (II-5). The invention relates to canine II-4, canine or CE feline Flt-3 ligand, canine or feline CD40, canine or feline CD144 (CD40 (Igand), canine II-5, canine II-13, feline interferon-alpha (IFN-alpha) CC and feline granulocyte macrophage colony-stimulating factor (GMCSF), and cnucleotides which encode these immunoregulatory proteins. The proteins, CC their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune CC may be used to treat autoimmune or infectious disease including CC allorgies, tumours, inflammation and graft rejection, and to increase the CC response from a co-administered antigen. The nucleotide sequences can CC also be used for the recombinant production of a protein, while CC nucleotide fragments are useful as probes, as amplification primers and CC nucleotide fragments are useful as probes, as amplification primers and CC nucleotide fragments are useful as probes, as amplification primers and CC of activity, while the antibodies may be used in detection, and in drug of arctivity, while the antibodies may be used in detection, and in drug

The invention relates to canine II-4, canine Or CC feline Plt-3 ligand, canine or faline CD40, canine or feline CD546 (CD40 ligand), canine IL-5, canine IL-13, feline interferon-alpha (IFN-alpha) CC and feline granulocyte macrophage colony-stimulating factor (GMCSF), and cnucleotides which encode these immunoregulatory proteins. The proteins, cc their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune cresponse in animals (particularly cats, dogs, horses and humans). They can be used to treat autoimmune or infectious diseases including CC allorgies, tumours, inflammation and graft rejection, and to increase the cresponse from a co-administerered antigen. The nucleotide sequences can collectide fragments are useful as probes, as amplification primers and conclectide fragments are useful as probes, as amplification primers and conclectine may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and in drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acids encoding immunoregulatory proteins from cats or dogs, useful for treating or preventing e.g. tumors or autoimmune disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 2000-072623/06.
